## #!/bin/bash

```
# Description for the intranet check (one line, support Markdown syntax)
# Copy the file /bin/ls to `hbtn ls` (in the current directory) and execute `./hbtn ls /var`
# The variable 'compare_with_sh' IS OPTIONNAL
# Uncomment the following line if you don't want the output of the shell
# to be compared against the output of /bin/sh
# It can be useful when you want to check a builtin command that sh doesn't
# implement
# compare_with_sh=0
# The variable 'shell input' HAS TO BE DEFINED
# The content of this variable will be piped to the student's shell and to sh
# as follows: "echo $shell_input | ./hsh"
# It can be empty and multiline
shell_input="./hbtn_ls /var"
# The variable 'shell params' IS OPTIONNAL
# The content of this variable will be passed to as the paramaters array to the
# shell as follows: "./hsh $shell params"
# It can be empty
# shell params=""
# The function 'check setup' will be called BEFORE the execution of the shell
# It allows you to set custom VARIABLES, prepare files, etc
# If you want to set variables for the shell to use, be sure to export them,
# since the shell will be launched in a subprocess
# Return value: Discarded
function check_setup()
      $CP "/bin/ls" "$PWD/hbtn ls"
      return 0
# The function 'sh_setup' will be called AFTER the execution of the students
# shell, and BEFORE the execution of the real shell (sh)
# It allows you to set custom VARIABLES, prepare files, etc
# If you want to set variables for the shell to use, be sure to export them,
# since the shell will be launched in a subprocess
# Return value: Discarded
function sh_setup()
      return 0
```

```
# The function `check_callback` will be called AFTER the execution of the shell
# It allows you to clear VARIABLES, cleanup files, ...
# It is also possible to perform additionnal checks.
# Here is a list of available variables:
# STATUS -> Path to the file containing the exit status of the shell
# OUTPUTFILE -> Path to the file containing the stdout of the shell
# ERROR_OUTPUTFILE -> Path to the file containing the stderr of the shell
# EXPECTED STATUS -> Path to the file containing the exit status of sh
# EXPECTED OUTPUTFILE -> Path to the file containing the stdout of sh
# EXPECTED ERROR OUTPUTFILE -> Path to the file continuing the stderr of sh
# Parameters:
#
     $1 -> Status of the comparison with sh
#
             0 \rightarrow The output is the same as sh
#
             1 -> The output differs from sh
# Return value:
    0 -> Check succeed
     1 -> Check fails
function check callback()
       status=$1
       $RM -f "$PWD/hbtn ls"
       return $status
}
```
